Tag Values in JSON Form

```
Version 1.5
$GPGGA,hhmss,ddmm,mmmm,a,dddmm,mmmm,a,x,xx,xxxx,M,xxxx,M,xx,xxx<CR><LF>
1      2      3      4      5      6      7      8      9      10     11     12     13     14

Version 2.1
$GPGGA,hhmss,ddmm,mmmm,a,dddmm,mmmm,a,x,xx,xxxx,M,xxxx,M,xx,xxx<CR><LF>
1      2      3      4      5      6      7      8      9      10     11     12     13     14     15

Version 2.3
$GPGGA,hhmss,jss,ddmm,mmmm,a,dddmm,mmmm,a,x,xx,xxxx,M,xxxx,M,xx,xxx<CR><LF>
1      2      3      4      5      6      7      8      9      10     11     12     13     14     15

1:      UTC time (hours, minutes, seconds)  Measured UTC [1/100 sec] (Version 2.3)
2,3:    Latitude (deg, min), N / S
4,5:    Longitude (deg, min), E / W
6:      GPS measurement status  0 = No position measurement
                                   1 = GPS positioning
                                   2 = DGPS positioning
                                   8 = Simulation mode (Version 2.3 only)

7:      Number of satellites used for position fix
8:      HDOP (0 - 20)
9,10:   Antenna altitude above sea level (m), u: sign (+/-)
11,12:  Geoid height (m), u: sign (+/-)
13:     Version 1.5 : DGPS data seconds expired
                    (NULL if not performing DGPS positioning)
        Version 2.1 : DGPS data seconds expired
                    (00 if not performing DGPS positioning)
        Version 2.3 : DGPS data seconds expired
                    (NULL if not performing DGPS positioning)
14:     Version 1.5 : DGPS reference station ID
        Version 2.1 : DGPS reference station
                    (0000 if not performing DGPS positioning)
        Version 2.3 : DGPS reference station
                    (NULL if not performing DGPS positioning)

15:     Checksum
```

NMEA Sentence as per Maker Manual / IEC document

SMARTShip – Onboard Features

Features

- Up to 5,000 collectable data points
- Multiple Servers with database replication
- Data sampling and transmission to shore at 30 second intervals
- IoT Broker designed for realtime and high latency environments with 60 seconds default client timeouts
- Ruggedized hardware designed for unfavorable and adverse environments
- Selected hardware provides vertical and horizontal scalability including physical or virtual capabilities

Updates, Security, & Patches

- Private repositories provide SMARTShip software patches and updates
- Vendor approved public repositories provide upstream patches and updates
- Automated vulnerability scanning

SMARTShip – Cloud Features

Features

- Dynamic scaling to support increased or decreased traffic
- Distributed Cassandra NoSQL clusters across three availability zones
- Geographically distributed backups residing in object storage
- Able to sustain an entire availability zone outage without disruption
- IoT Broker designed for both realtime and high latency environments with 60 second default client timeouts

Updates, Security, & Patches

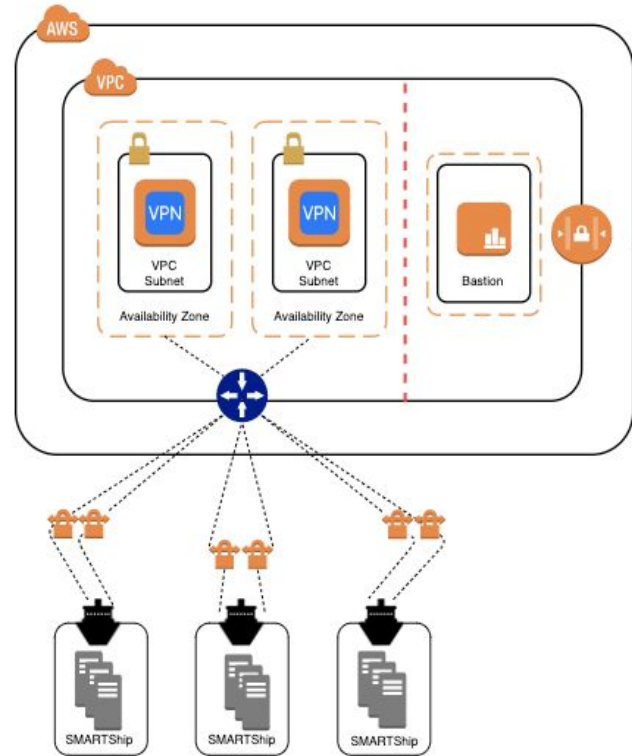

- Private repositories provide SMARTShip software patches and updates
- Vendor approved public repositories provide upstream patches and updates for Operating System
- Automated vulnerability scanning
- Managed services benefit from AWS automated updates and patching

SMARTShip – Cloud Security

Security

- Access to SMARTShip cloud restricted to key trusted personnel through use of AWS IAM
- All VPCs, Subnets, EC2 instances secured by use of Network ACLs, & security groups
- Communications to private subnet restricted from specific ip ranges
- Use of Public & Private subnets
- Leverage NAT Gateway to hide servers inside private subnet
- Access to SMARTShip production network restricted through a bastion host
- All access to various servers are monitored and logged
- All data transmission through public internet is encrypted

SMARTShip – Remote Access

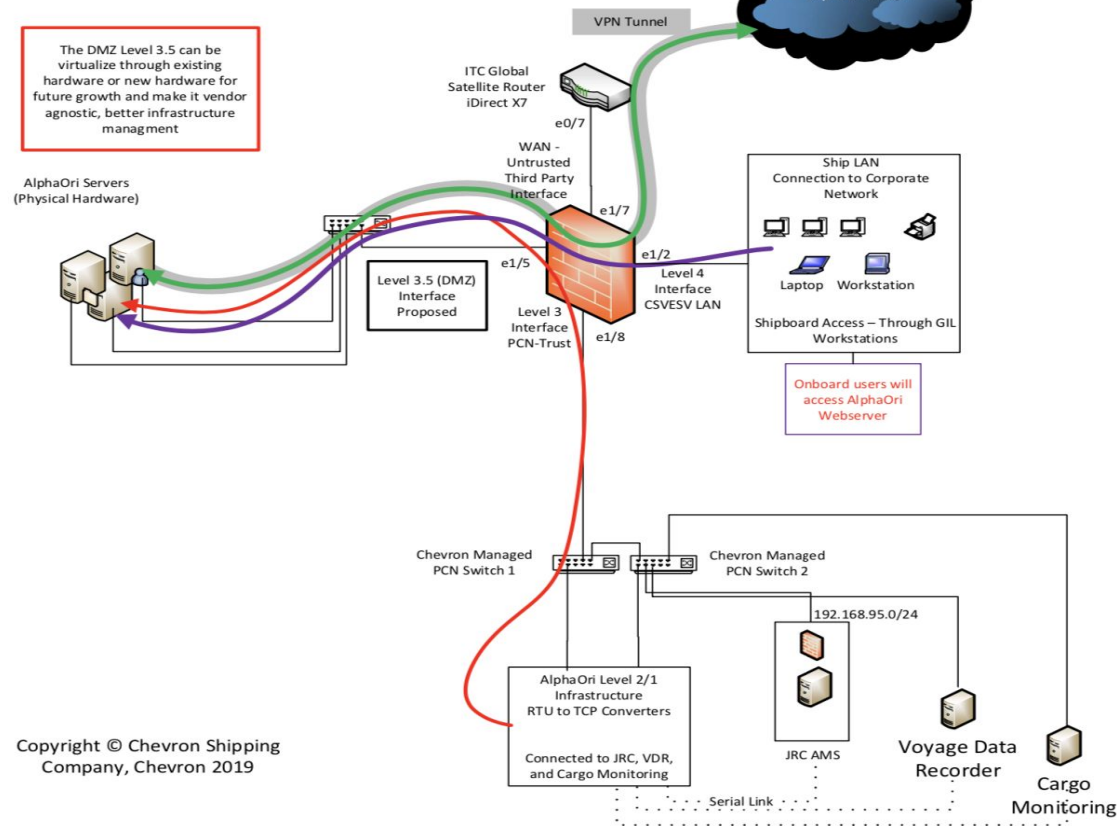

Security & Access Management

- Multifactor Authentication
- Least Privileged
- Audit Log and Monitoring
- Bastion Host for VPC access
- Network ACLs for AOT Operations

AOT Operations

- Remote AOT Operations support is possible via highly available SSL VPN implementations
- Troubleshooting, installations, and local or remote vulnerability scans require remote accessibility by AOT Operations
- The secure VPN provides fluid access to ensure proper automation for packaging and updates

AlpaOri Logical Architecture Proposed

Copyright © Chevron Shipping Company, Chevron 2019

SMARTShip – Bandwidth Usage

1. Total number of data tags = 3000
2. Approx. size of each data tag = 170 bytes
3. Transmission Frequency = 30 seconds
4. Uncompressed file size = 498 kBytes
5. Compressed with GZIP (assuming 85% Compression) = 75 kB
6. Bandwidth Requirement = 2.5 KBytes/sec or 20 KBits/sec

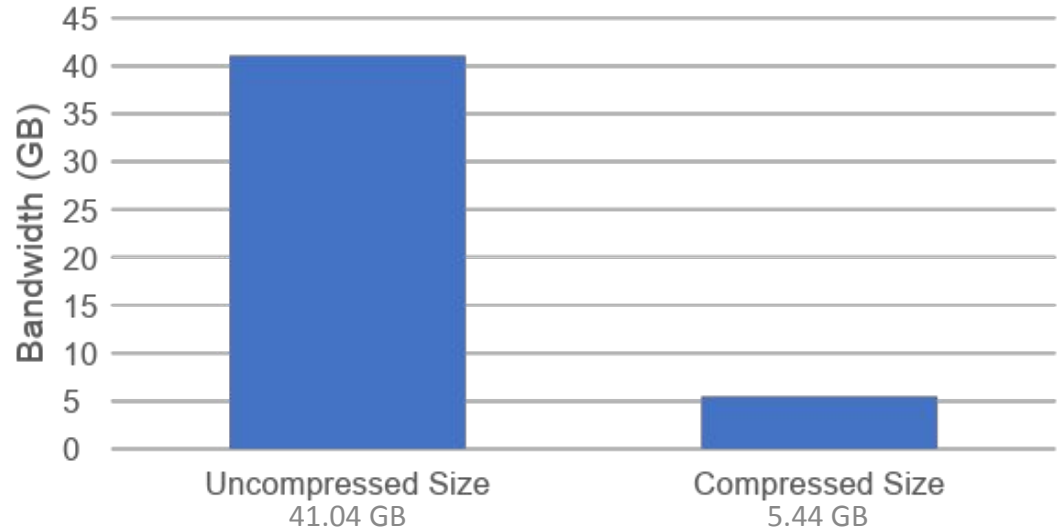

SMARTShip – Data Compression

GZIP Savings

■ Savings ■ Compressed Size

Monthly Bandwidth Usage (GB)

Monthly Bandwidth Usage (Time Series Data)

1. Assuming a total of 3000 tags at approx. 170 bytes per tag
2. Frequency – once every 30 seconds
3. Monthly bandwidth savings of about 87% or 35.6 GB
